# KANE LARIVIERE

Charlotte, NC | kanelariviere@outlook.com | linkedin.com/in/kane-lariviere | knlrvr.dev

## SUMMARY

Software developer with 2+ years of experience. Leveraging knowledge & expertise across multiple areas of software development and design to create memorable experiences for the web. Committed to accessibility, equity, education, & sustainability.

## EXPERIENCE

**Full Stack Developer, Freelance**
KNLRVR, *Remote*                                                      2021 – Present

- Developed responsive & optimized web apps for a variety of clients with excellent cross-browser functionality using HTML, CSS, JavaScript, and more.
- Improved UI/UX of various applications, increasing user engagement by 10% in 6 months.
- Decreased development time by 20% in 1 year through consistent code reviews, refactoring, tests, and library utilization.

**IT Help Desk, Digital Support**
SouthState Bank, *Remote*                                                      2022 – 2024

- Provided technical support to consumers, small businesses, and other internal departments related to proprietary software and consumer-facing software.
- Created robust documentation for edge cases, leading to average handle time decreasing by 28% in 12 months.
- Consistently exceeded monthly and quarterly KPI targets by up to 20%.

## EDUCATION

**Bachelor's in Computer Science**
Western Governors University                                                      2024

**Associate of Computer Science**
Gaston College                                                      2022

## PROJECTS

**TTRPCompanion**                                                      View Live | View Code
Led the design and development of a TTRPG campaign tracker, including relevant campaign, party, and character details. Developed with TypeScript, Next.js, Tailwind, tRPC, Prisma, Supabase, NextAuth, & Playwright.

**The Sky Is Fake**                                                      View Live | View Code
Developed an image sharing platform dedicated to pictures of the sky that don't seem real. Developed with TypeScript, Next.js, Tailwind, Convex, & Clerk.
